- 6) ☐ Other:

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, it is unclear whether the first and second switching transistors are parts of the package. Furthermore, it is unclear which part of the electronic circuit in which the control circuit being arranged to switch. In claim 4, it is unclear what "a power supply input" and "a power supply source" represent. Are they shown in any of drawings?

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

3. The drawings are objected to because an appropriate legend is needed for reference numeral (10). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 2-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee (Pat # 5,107,208) .

As to claim 2-3, Lee discloses in figure 1 a testing system having first and second switching transistors (14,15), first and second contact terminals (22,23) and a control circuit being arranged to switch the electronic circuit switch transistors (14,15) between at least three states. the first and second transistors being switched on and off in the first and second state and both transistors being switched on in the third state. It appears that the first and second transistors with a main current channel being couple in parallel between the first and second contact terminals (22,23).
